

DWS Concept Kaldemorgen

Total Return Strategies

August 2025As at 29/08/2025

Fund Data

Investment Policy

DWS Concept Kaldemorgen is a benchmark free, total return Multi Asset fund with a moderate risk profile. The fund five year rolling volatility should be expected to be between 4% to 8% (no guarantee). The management targets to optimize the return per unit of risk by investing in equities, bonds, currencies, gold and other suitable assets. The fund may use derivatives for hedging and investment purposes. In order to achieve an optimal expected return to risk ratio, risk management is an integral part of the investment process. The fund is actively managed.

Fund Management's Comment

You can find the Fund management's detailed commentary in DWS Flagship Fund Reporting and on the individual pages of the factsheets.

Please note: a separate monthly special report on the Fund is available for financial advisors and institutional clients.

*plus performance-related fee

(2) The Total Expense Ratio (TER) generally includes all expense items charged to the Fund apart from transaction costs and performance fees. If the Fund invests portions of its assets in target funds, the costs of the respective target funds will also be taken into account. The Fund incurred the total expenses listed here in its last financial year, which ended on 31/12/2024. They are subject to change from year to year.

(3) The Total Expense Ratio (TER) generally includes all expense items charged to the Fund apart from transaction costs and performance fees. The total expenses listed here represent an estimate since the Fund was launched on (CHF FCH100:30/09/2022, LDM:29/01/2025). Actual expenses will be calculated and published once the first financial year has ended. The annual report for each financial year will contain the expense details with their precise calculation.

Fund Management's Comment: DWS Concept Kaldemorgen

Total Return Strategies

Data in relation to the fund or the leading unit class.	August 2025	As at 29/08/2025
---	-------------	------------------

Performance Review

In August, initial uncertainty was caused by the implementation of the new U.S. customs policy and a disappointing U.S. labor market report. However, stock markets reacted positively after Fed Chair Jerome Powell boosted sentiment at the central bank symposium in Jackson Hole by hinting at possible interest rate cuts starting in September. At the same time, concerns about the Fed's independence and rising inflation expectations weighed on the market environment. In France, a vote of confidence led to increased volatility and rising yields. In this environment, the MSCI World Index gained approximately 0.3% (in euros), the euro appreciated by about 2.8% against the U.S. dollar, gold (in euros) rose by around 2.3% compared to the previous month, and the oil price fell by about 8.3% (WTI in euros).

Performance Attribution

The DWS Concept Kaldemorgen (share class FC) remained nearly stable with a performance of -0.15%. Equities and gold contributed slightly positively to performance over the course of the month. Overall, there was little movement in August. After the initial sell-off, an upward trend began on the equities side – which was then slowed down again towards the end of the month. Overall, this resulted in only minor movement for the portfolio. The same applied to the bond side. Interest rate and spread movements remained limited throughout the month. The Jackson Hole conference briefly led to falling yields, which also impacted our portfolio – but only temporarily. The entire bond portfolio delivered an almost “zero performance” for the past month. The USD weakened again against the EUR, contributing slightly negatively to overall performance. Once again, it became clear that reducing foreign currency risk in the portfolio (reminder: USD reduced from approx. 35% to 10% in a short time) had a positive effect on volatility and performance.

Current Positioning

Following significant adjustments in July (e.g., increase in EUR IG corporates, reduction in US government bonds, addition of cyclical equities), the allocation was left almost unchanged in August. The strategic adjustments have resulted in a combination of good returns in the bond segment (approx. 3.3%) with low credit and currency risks in the portfolio. Given ongoing uncertainties regarding US trade, tariffs, and geopolitics, as well as tensions and uncertainties within the US (e.g., regarding the independence of the US Federal Reserve), we continue to view the US dollar more as a risk than an opportunity. Combined with high hedging costs, this leads us to prefer bonds directly in EUR. Additionally, we continue to maintain some currency hedges (approx. 10%). Overall, the US dollar position in the portfolio remains low at just under 10%. The allocation to gold was also left unchanged in August.

Outlook

Note: The key terms are explained in the glossary.

Opportunities

In accordance with the investment policy.

Risks

- The fund uses derivatives on underlyings so as to participate in their increases in value or to bet on their losses in value. The increased opportunities associated with this are accompanied by increased risk of loss. Furthermore, derivative transactions may be used to hedge the fund's assets. The use of derivative transactions for hedging purposes may reduce the fund's upside opportunities.
- The fund invests in equities. Equities are subject to strong price fluctuations and thus also to the risk of price decreases.
- The fund invests in convertible and warrant-linked bonds. Convertible and warrant-linked bonds embody the right to convert the bond into equities or to acquire equities. The performance of the value of the convertible and warrant-linked bonds is therefore dependent on the price performance of the equity as the underlying. The risks of the performance of the underlying equities can therefore impact on the performance of the convertible and warrant-linked bonds.
- The fund invests in bonds, the value of which depends on whether the issuer is able to afford its payments. The deterioration of credit quality (ability and willingness to repay) may have an adverse affect on the value of the bond.
- Due to its composition/the techniques used by the Fund management, the investment fund has elevated volatility, i.e. the share price may be subject to significant fluctuations up or down within short periods of time. The share value may fall below the purchase price at which the customer acquired the share at any time.

Investor profile: Growth-oriented

The Fund is intended for the growth-oriented investor seeking returns higher than those from capital market interest rates, with capital growth generated primarily through opportunities in the equity and currency markets. Security and liquidity are subordinate to potential high returns. This entails higher equity, interest rate and currency risks, as well as default risks, all of which can result in a loss of capital.

General information

When the custodian sets the price on the last trading day of the month there can be a difference of up to ten hours between the times at which the fund price and the benchmark are calculated. In the event of strong market movements during this period, this may result in the over- or understatement of the Fund's performance relative to the benchmark at the end of the month (this is referred to as the "pricing effect").

Subscriptions can only be made and units held in accordance with the terms set out in the current version of the sales prospectus, the prospectus and/or the KID (Key Information Document) .

In respect of the units offered in Switzerland, the place of performance is the registered office of the Representative. The place of jurisdiction shall be at the registered office of the representative or at the registered office or domicile of the investor.

The current sales prospectus, the articles of association, KID (Key Information Document) as well as the annual and semi-annual reports of the swiss CIS can be obtained free of charge from the fund management company, Solutions & Funds SA, Zurich Branch, Schweizergasse 10, CH-8001 Zurich, from the custodian bank CACEIS Investor Services Bank S.A., Esch-sur-Alzette, Zurich Branch, Bleicherweg 7, CH-8027 Zurich, or from the main distributor in Switzerland, DWS CH AG, Hardstrasse 201, CH-8005 Zurich.

For detailed information on the related risks, please consult the fund contract, the terms of contract, the management regulations, the sales prospectus and/or the key investor information. The information contained therein is based on our assessment of the present legal and tax environment. The views and opinions presented here represent the most recent estimates of DWS or any of its subsidiaries and are subject to change at any time without prior notice.

Units issued in a collective investment scheme may only be offered for sale or purchase in jurisdictions where the sale or purchase thereof is permitted. Accordingly, the US Securities Act of 1933 in its current form contains a prohibition on units in this collective investment scheme, and as such, they may not be offered, sold or distributed in the United States to US citizens or residents of the United States. Subsequent transfers of units within the US or to US citizens or residents are also prohibited. This document may not be brought into circulation in the US.

For funds under foreign law:

Representative in Switzerland:

DWS CH AG
Hardstrasse 201
CH-8005 Zurich

Paying agent in Switzerland:

Deutsche Bank (Suisse) SA
Place des Bergues 3
CH-1201 Geneva

For funds under Swiss law:

Main distributor in Switzerland:

DWS CH AG
Hardstrasse 201
CH-8005 Zurich

General Risk Warnings

Any investment in units of a collective investment scheme entails or is associated with equity market, bond market, exchange rate, interest rate, credit, volatility and political risks. Each of these risks may appear in connection with other risks. A brief description of some of these risk factors is provided below.

Prospective investors should have previous experience with the financial instruments that are in use in the specified investment policy. Investors should fully understand the risks associated with investments in fund units and only make investment decisions after consulting with their legal, tax, financial or other advisors in regards to (i) the suitability of an investment in units in view of their personal tax and financial position and/or other circumstances; (ii) the information contained in this prospectus; (iii) the investment policy of the collective investment scheme; and (iv) the risks associated with the investment under the planned investment policy presented by the collective investment scheme.

Please note that investments in collective investment schemes entail both opportunities on the upside and risks on the downside. Units of collective investment schemes are securities and as such their value fluctuates with the rise and fall in the value of the underlying assets. The value of the units may accordingly rise above or fall below the purchase price. No guarantee therefore is given that the objectives of the investment policy will be achieved.
Past performance is not necessarily a guide to future returns.

Alpha

A measure of the difference between the risk-adjusted return on an investment and a benchmark. The alpha measures the part of the performance that cannot be explained by market movements or market risk, but rather is derived from the selection of securities within the market. Alpha is a way of measuring the active contribution to performance made by the portfolio manager. It is also a good yardstick to use when comparing several funds. The figure is calculated on a 3-yearly basis.

Average dividend yield

Measures the average dividend amount, based on the current share price. This figure is calculated based on the shares (including ADRs/GDRs - > Depositary receipts) and REITs contained in a fund.

Average market capitalization

Measures the average market capitalization of the shares, REITs and ADRs/GDRs (depositary receipts) contained in a fund. The market capitalization represents the total market value of a company as determined by multiplying the number of shares issued by the current share price.

Beta factor

A measure of sensitivity - given as the average percentage change in the price of a fund when the market (benchmark) rises or falls by 1%. A value over (under) 1 means that on average the fund exhibits more (less) volatility than the benchmark. The figure is calculated on a 3-yearly basis.

Correlation coefficient

Describes the degree to which two values (fund versus benchmark) move in the same direction. The value of the correlation coefficient is between -1 and +1. A correlation of +1 means that the fund generally moves in the same direction as the benchmark, while -1 indicates that the fund generally moves in the opposite direction. A correlation of 0 means that there is no relation between the price movements of the fund and the benchmark. The figure is calculated on a 3-yearly basis.

Coupon

The coupon is the portfolio's average weighted coupon.

Duration (in years/in months)

A measure of the sensitivity of an investment to changes in interest rates. Duration, which was developed by Frederick Macaulay, is the average period for which invested capital is committed. Because of the interest payable over time on the invested capital, duration is shorter than -> maturity. This version of duration is used in DWS Top Reporting and refers to invested assets (without "Cash and other holdings").

Information ratio

The information ratio measures the difference between the annualized average return of the fund and that of the benchmark, divided by the Tracking error. The higher this value is, the more the investor compensated for the risk in the fund. The figure is calculated on a 3-yearly basis.

Maximum drawdown

The maximum drawdown is the largest percentage drop in value in a given period of time. It measures the amount the fund falls from its highest point to its lowest point in the selected timeframe. The figure is calculated on a 3-yearly basis.

Modified duration (in years/in months)

Serves as a measure of interest-rate sensitivity. Modified duration indicates the percentage change in price of a bond (in a portfolio) when the market interest rate changes by 1%. In order to calculate the percentage change in the bond price, the modified duration of the bond is multiplied by the percentage change in the interest rate. This figure helps investors assess the risks and opportunities of a bond at a glance.

Sharpe ratio

A measure of risk developed by William F. Sharpe, defined as the excess return on an investment over that of a risk-free investment in relation to the risk of the investment. The higher the Sharpe ratio, the higher the return the investor receives for the risk the investment carries (expressed in volatility). The Sharpe ratio can be used to compare multiple funds. The figure is calculated on a 3-yearly basis.

Tracking error

The tracking error is the standard deviation of the yield differential between a fund and its benchmark. This makes it a measure of how well the fund manager tracks the benchmark. The figure is calculated on a 3-yearly basis.

VaR (Value at Risk)

A measure of risk that indicates the maximum fund losses with a given probability for a given period of time (holding period). VaR is calculated on the basis of the daily prices of the individual securities contained in the portfolio for a year.

Weighted Average Life

The weighted average life of the times of the principal repayments of a liability, i.e. a bond. Refers to invested fund assets (without "Cash and other holdings").

Yield

The yield is the annual return on a capital investment, measured as the actual interest earned (effective yield) on the capital invested. It is based on the fund's income (e.g., interest, dividends, realized capital gains) and change in the price of the assets held in the fund. The yield of a fund is

derived from the invested assets (without "Cash and other holdings") and is presented as a "gross" figure, i.e., before the deduction of total expenses/fee.

Volatility

Volatility expresses the degree to which the yield on an investment (the price performance of a fund, for example) varies from a mean value in a specific period of time. This makes it a measure of fund risk. The greater the variation from the mean, the higher the volatility. Knowing the volatility allows investors to assess how uncertain the return potential of an investment is. The figure is calculated on a 3-yearly basis.
